WORK EXPERIENCE

10.2023 — Present

Clevertec
frontend-developer

Responsibilities
- Development and maintenance of a UI application (adding new features, updating dependencies)
- Fixing bugs
- Refactoring code, fixing code smells and other issues identified by SonarQube
- Development of unit and e2e tests for the frontend

Job Description
The developed application pertains to the fintech sector (for JSC 'AlfaBank'). It is built based on a microservices architecture;

The main technology used is React, along with NodeJS;

The scope of responsibility includes modules written in both class-based and functional approaches;

RTK, including RTK Query, is used for state management. Jest and Cypress libraries are used for test development. Modules of the application are connected via WMF (Webpack). There is active use of the Core-components library. Identified vulnerabilities are fixed using AppSec;

Additionally, there is the responsibility of preparing educational presentations on technical topics for newly hired junior specialists.

04.2022 — 10.2023

Asist-lab
frontend-developer

Responsibilities
- Development of UI applications with different technologies (React, NextJs, Angular(2+))

Job Description
An outsourcing company specializing in working with clients from Israel, Europe, and the USA. I improved my English language skills there.

Also, working there I had the opportunity to use a wide range of development tools (Node (Express), React, Next, Angular (with extensive using RxJS)), and to participate in the development of various front-end applications (an application for an eye surgery clinic, a CRM system with extensive functionality for an American client, an online portal for customers and service providers in the entertainment industry…).
